tory, Jake's "yellow pages" of the Internet, prefigured by decades our age of searchable, reachable online social connections. Both of these simple, forward-thinking utilities would eventually become part of the ARPANET, folding the role of the NIC into the network itself. Like Grace Hopper with her automatic programming, Jake replaced herself with a machine.

As the ARPANET Directory—the Internet's yellow pages—grew alongside the network, Jake made important decisions about how it should be handled. One was philosophical: because the ARPANET community was such an odd mix of military people, computer scientists, and the occasional undergrad interloper, Jake insisted that names, never formal titles, be included in the directory. Keeping military rankings straight was a headache, and more importantly,

ibash commented 7 days ago • edited ▾

- Electron version: Electron built at `aea06ed`, also reproduced on 1.8.2-beta.4
- Operating system: macOS 10.13.2

How to reproduce

1. Clone this repo: <https://github.com/ibash/crashed-crash>
2. `yarn install`
3. `yarn start`

Crash example [here](#)

Expected behavior

background web contents is continually crashed and recreated.

Actual behavior

Main process eventually crashes - see link above.

zhuowenli commented 7 hours ago • edited

- Electron version: electron@2.0.0-beta.7
- Operating system: macOS 10.13.4

Actual behavior

Election crash when `<webview>` using `partition`.

But `electron@1.8.4` is ok.

How to reproduce

1. Use `BrowserWindow` open a link in new window. (this page has insert `<webview partition="xxx" url="http://xxx">` tags)
2. Close window.
3. Open again, then Election app will crash.

welcome bot commented 7 hours ago

👋 Thanks for opening your first issue here! If you're reporting a 🐞 bug, please make sure you include steps to reproduce it. We get a lot of issues on this repo, so please be patient and we will get back to you as soon as we can.

To help make it easier for us to investigate your issue, please follow the [contributing guidelines](#).

Automatic Staging Deployments

Continuous Deployment

The screenshot shows a web browser window for the Heroku dashboard, specifically for the 'electron-website' app. The URL in the address bar is <https://dashboard.heroku.com/apps/electron-website/deploy/github>. The page displays configuration for automatic deployments from GitHub.

Automatic deploys

Enables a chosen branch to be automatically deployed to this app.

Automatic deploys from `master` are enabled

Every push to `master` will deploy a new version of this app. **Deploys happen automatically:** be sure that this branch in GitHub is always in a deployable state and any tests have passed before you push. [Learn more](#).

Wait for CI to pass before deploy

Only enable this option if you have a Continuous Integration service configured on your repo.

[Disable Automatic Deploys](#)

Semantic Versionsing (SemVer) is a simple set of rules that dictate how version numbers are assigned and incremented.

major.minor.patch

breaking.feature.fix

Semantic Release is a tool for automating software releases: let humans write meaningful commit messages and leave versioning up to the machines.

Semantic Release removes the connection between human emotions and version numbers.

The build is failing

✨ Good work on this PR so far! ✨ Unfortunately, the [Travis CI build](#) is failing as of [439d09a](#). Here's the output:

npm test

```
> electron-apps@1.2681.0 test /home/travis/build/electron/apps
> mocha --reporter min test/human-data.js && standard --fix

11120 passing (2s)
1 failing

1) human-submitted app data blockbench blockbench.yml colors allows goodColorOnWhite to

    AssertionError: blockbench: contrast ratio too low for goodColorOnWhite. Try: #0062
    + expected - actual

    -false
    +true

    at Context.<anonymous> (test/human-data.js:78:52)
```

I'm sure you can fix it! If you need help, don't hesitate to ask a maintainer of the project!

This comment was automagically generated by [ci-reporter](#). If you see a problem, open [an issue here](#).

When her manager returned to work the following Monday, he found two things sitting on his office chair: the spanning-tree protocol specifications and the poem, which has taken on mythical dimensions in network engineering circles. Many years later, Radia's son set *Algorhyme* to music, and Radia and her daughter, an opera singer and violinist, performed it at MIT's Lincoln Laboratory. As for the spanning-tree protocol, it transformed Ethernet from a limited, localized technology into something that could support much larger networks, and it is now fundamental to the way computers are networked. It's Radia's most famous, although by no means her only, contribution to networking. Her work might be invisible to the everyday user, but it's invisible in the way that laws are invisible or the rules of traffic in a busy city are invisible: it directs the flow of information at a layer beyond our conscious awareness. "If I do my job right," she explains, "you never see it."

fin.
